- Finger Throttle: The throttle block can be rotated forward for use as a finger throttle, if preferred. Great for changing hand positions on a long ride and for more control through bumps.

**SKIS**

Skis make all the difference in getting your sled to handle just how you like. We offer eight different styles of skis for you to choose from. Which one is right for you? Here are some tips on choosing the right one:

- **PILOT 5.7 SL** 2 carbides/ski
  - Lightweight single or dual runner skis provide effortless skiing at low speeds and constant grip without compromises at higher speeds.
  - Standard use is one carbide runner—add a second to reduce darting.
  - Great all-around trail performance.

- **PILOT 7.4** 1 carbide/ski
  - Specifically designed for utility purposes.
  - Deeper tip allows better control while towing.
  - Increased tip-up rear end for better reverse capability.
  - 1 inch wider than Pilot DS-2 for improved flotation in deep snow.
  - More aggressive cornering while keeping a light skiing feeling.

- **PILOT 5.7** 1 or 2 carbides/ski
  - Lightweight single or dual runner skis provide effortless skiing at low speeds and constant grip without compromises at higher speeds.
  - Standard use is one carbide runner—add a second to reduce darting.
  - Great all-around trail performance.

- **PILOT TS ADJUSTABLE** 1 carbide/ski
  - The industry’s first and only adjustable ski.
  - The Pilot TS skis allow riders to change ski bite for changing snow conditions or riding styles easily and quickly.
  - With the Pilot TS skis you dial in the perfect setting by turning a knob on the ski leg.
  - The ski runner has 1/2” (12.5 mm) of travel up and down.
  - The thin runner and square keel design work together to eliminate darting.

- **PILOT X** 1 carbide/ski
  - Completely redesigned from Pilot 5.7 with a new structural topside for 13% more rigidity.
  - 31 mm longer keel with a revised rear portion for improved 2-stage keel design improves flotation.
  - Improved to better match the REV Gen4 features.
  - Redesigned top side for increased rigidity.
  - 20 mm shorter overall length and more dramatic tip-up at the rear.
  - 63 mm longer runner plate increases lateral surface area for more effective cornering.
  - Smoother front approach angle to reduce darting even further.

- **PILOT RX** 1 carbide/ski
  - Straight from the MXZ X 600RS race sled.
  - Very aggressive profile for sharp handling.
  - Lightweight with high rigidity.
  - Proven on the ISOC race circuit.

- **PILOT DS-2** 1 carbide/ski
  - Designed specifically for deep snow riding.
  - Works well in many off-track applications from utility sleds to mountain skis.
  - Thin edge is effective for grabbing side hills.
  - Evolution of the DS with a deeper and shorter keel.
  - Increased agility and less effort than the original.
  - Great all-around ski for deep snow use.
  - Standard in mountain skis with 2.5” lug tracks and utility skis.

- **PILOT DS-3** 1 carbide/ski
  - Deep snow ski designed to match the latest 7” lug and longer tracks.
  - 0.47” (12 mm) deeper keel than DS-2.
  - Works well for aggressive riders using the biggest tracks.

- **PILOT DS-4** 1 carbide/ski
  - 2-stage keel design improves flotation.
  - Entire keel has been moved forward with a revised rear portion for improved consistency in deep snow and straighter tracking in rough conditions.

ReThink Performance - Dynamic Breathability

In contrast to other membrane technologies, the poreless compact Sympatex membrane is based on a physical and chemical principle. The water-attracting (hydrophilic) part of the membrane absorbs the moisture from the body and emits it to the outside by evaporation. The water vapour molecules are transported outwards along the hydrophilic molecular chains. The molecular structure (hydrophilic components) of the Sympatex membrane swells in moisture and therefore provides space for water vapour transport and fast evaporation.

Kanuk has brought its signature technical expertise to the singular essence of Ski-Doo to create entirely original outerwear. This limited-run collection sits at the intersection of two brands that have captured the imagination of outdoor-loving Canadians for a combined 115 years. The collection is at once technically impervious to extreme conditions on the trails and a joyful homage to the best our winters have to offer. Suited to both the conditions of the backwoods and the city streets, these garments are a true reflection of where Kanuk and Ski-Doo meet.

Our proprietary ExoFloat™ Assist System features an exoskeleton that is fully body mapped with hi-tech flotation panels that help assist you in case of a fall. It also has mesh panels at the bottom to evacuate water. For optimal performance, wear the Vasa jacket and pants together or wear the new Vasa + jacket alone.

**Key technologies**

**SELF LEVELING**
Strategically placed ExoFloat™ panels help assist you in self leveling to the surface.

**EXIT ASSIST**
Mesh drainage to ensure you are not weighed down by the water that can inhibit exit.

**FLOAT ASSIST**
Allow the garment to assist you in floating to the surface and to a safe exit point.

This is not a coast guard approved personal flotation device, this is a flotation assistance technology. Always make sure bodies of water are safe for riding and know currents that may affect ice thickness before adventuring.

**NEW VASA + PREMIUM JACKET NO LONGER REQUIRES FLOATATION ASSIST PANTS**

*This is not a coast guard certified personal flotation device, but rather flotation assistance gear.*
